SUMMARY

Full stack engineer with **2 years** of experience shipping production software in TypeScript, React, Node.js, and PostgreSQL. Led development at Smartscripts across **4 in-house products** and **5 clients**, and now freelances on a booking and payments platform. Builds core infrastructure from scratch, including an **OpenID Connect identity provider** and a **zero-dependency HTTP framework** on npm.

EXPERIENCE

Freelance

Mar 2026 – Present

Full Stack Engineer

Remote

- Built **MentorAIDConnect** (mentoraidconnect.com) with a **3-person team** for MentorAID, a Delhi-based UPSC-prep startup valued at **INR 4 Cr**. Students use it to book one-on-one mentor sessions and buy answer-copy evaluation packages.
- Designed slot booking with **20-minute payment holds** that expire on read, which removed the need for a background cleanup job. Payments that capture after a slot is taken get flagged for refund.
- Integrated **Razorpay** with an order and payment model that copies price and time onto each record at purchase, so later pricing changes never rewrite past orders.
- Developed a **credit wallet** with an audit ledger, admin-managed coupons, and **Clerk** role-based access for students, examiners, mentors, and admins.

Smartscripts Pvt. Ltd.

Mar 2024 – Mar 2026 (2 years)

Software Development Team Lead

Pune, India

- Shipped **4 in-house products** across the full stack: Smart Booking System, Smart Digital Cards, Smart WhatsApp Promotion App, and an in-house CRM.
- Took ownership of the **IT department**, delivering projects for **5 clients**: architecture decisions, project scoping, quotations, and on-time delivery.
- Designed and implemented **Node.js REST APIs** with PostgreSQL schemas using Prisma ORM.
- Mentored **4 interns** in React Native, Node.js, and Next.js.
- Conducted **30+ technical interviews** for new hires over 2 years.
- Entered a **profit-share agreement** reflecting expanded ownership and responsibility over the firm's technical direction.

PROJECTS

Shikai: GitHub Companion App | Code | Play Store React Native, Expo, TypeScript, React Query, Cloudflare Workers

- A **read-only GitHub client** for Android, **live on the Play Store**. Covers repos, PR diffs, Actions job logs, contribution streaks, and a home screen widget, with no write access to the account.
- Integrated GitHub's REST and GraphQL APIs with a **3-layer prefetch architecture** for instant screen transitions, plus deep links that open any shared github.com URL on the matching screen.
- Secured sign-in with **GitHub OAuth (PKCE)** through a **Cloudflare Worker** token proxy, Keystore-backed token storage, root/debugger detection, and token scrubbing in Sentry crash reports.
- Animated with Reanimated at **60fps**, rendered long lists with FlashList, and added **MMKV-backed offline caching**. Ships over-the-air updates through EAS.

Kleis: OIDC Identity Provider & Next.js SDK | Code | Live Node.js, TypeScript, Express, Prisma, PostgreSQL, JWT

- Built an **OpenID Connect Identity Provider** from scratch with no third-party auth engine, implementing the **OAuth 2.0 Authorization Code Flow** plus discovery and JWKS endpoints so any compliant client can auto-configure.
- Implemented **PKCE (S256)**, **RS256 JWT signing**, and **refresh token rotation** using an atomic Prisma update, so parallel refreshes can't both succeed and a reused token revokes every session.
- Added **Single Sign-On** across client apps with PostgreSQL-backed sessions, consent screens, and RP-initiated logout that revokes sessions and tokens together.
- Shipped a Next.js SDK (@kleis-auth/nextjs) with context providers, hooks, and middleware that reduces auth integration to **under 15 lines of code**.

XML Sitemap Generator: SEO Crawling Engine | Code | Live Next.js, BullMQ, Redis, Puppeteer, Server-Sent Events

- A **hybrid web crawler** with a **BullMQ background job queue** backed by Redis, handling up to 1,000 pages per crawl with configurable concurrency and depth limits.
- Detects **Client-Side Rendered** pages via a scoring-based heuristic model and falls back to Puppeteer, with **async browser pooling** that auto-recycles Chromium every 100 loads.
- Parses robots.txt per **RFC 9309** with wildcard and longest-match semantics, and generates **Google-compliant image sitemaps** from shadow DOM and srcset attributes.
- Automatically **splits large sitemaps** (over 50,000 URLs) into index files, verifies discovered URLs with HEAD-only requests, and blocks SSRF against private IPs.
- Streams live progress to the UI via **Server-Sent Events**, and hardened the worker with **10-minute job timeouts**, forced cleanup of orphaned Chromium processes, and graceful shutdown.

Reiatsu: Zero-Dependency HTTP Framework | Code | npm

TypeScript, npm

- Published an HTTP server framework with **zero dependencies**, built entirely on **Node.js core modules** (http, zlib, crypto).
- Engineered a **compile-time type-safe router** with route parameter inference using recursive template literal types, and an async onion-model middleware pipeline.
- Ships with rate limiting, CORS, CSRF protection, Brotli compression, and JWT authentication. **Under 45KB** total.

TECHNICAL SKILLS

Frontend: React.js, Next.js, React Native/Expo, TypeScript, Tailwind CSS

Backend & Frameworks: Node.js, Express.js, REST APIs, OIDC

Databases & ORM: PostgreSQL, Prisma, MongoDB, Mongoose, SQLite

Tooling: TanStack Query, Zustand, Zod, React Hook Form, Turborepo, Vitest

DevOps & Infra: Vercel, Render, Hostinger, Git/GitHub, Cloudflare Workers, Puppeteer

EDUCATION

Sinhgad College of Engineering

Bachelor of Engineering in Electronics & Telecommunication

July 2024

Pune, India

CERTIFICATIONS

Full Stack Web Development Cohort, ChaiCode (Hitesh Choudhary & Piyush Garg), **Completed 2026**

Focus: Advanced backend architecture, system design, and scalable API development.
