SUMMARY

Full Stack Engineer with **2 years** of professional experience building **production systems**: auth protocols, API design, database architecture, and the interfaces people actually use. I specialize in the **PERN stack** with a deep interest in **Framework internals**, **security protocols**, and **system design**. I rebuild things from **first principles** to understand the problems they solve at the protocol level.

EXPERIENCE

SpaceBuilder

2026 – Present

Co-Founder & CEO

Pune, India

- Co-founded an IT services startup building custom software, **AI automations**, and web applications for businesses.
- Leading **technical direction**: scoping projects, architecting solutions, and shipping client work.
- Building workflow automations and AI systems that replace manual processes with engineered solutions.

Smartscripts Pvt. Ltd.

Mar 2024 – Mar 2026 (2 years)

Software Development Team Lead

Pune, India

- Built and shipped **production products** across the full stack, including Smart Booking System, Smart Digital Cards, Smart WhatsApp Promotion App, and an in-house CRM.
- Took ownership of the **IT department**: architecture decisions, client-facing project scoping, quotations, and on-time delivery.
- Designed and implemented **Node.js REST APIs** with PostgreSQL schemas using Prisma ORM.
- Mentored interns and junior developers in React Native, Node.js, and Next.js.
- Conducted technical interviews for new hires.
- Entered a **profit-share agreement** reflecting expanded ownership and responsibility over the firm's technical direction.

OPEN SOURCE & PRODUCT DEVELOPMENT

Shikai: GitHub Companion App |

React Native, Expo, GitHub REST & GraphQL API, TypeScript

- A **read-only GitHub dashboard** for Android, currently in **closed testing on the Play Store**. Browse repos, explore code, track contribution streaks, all without the pressure of taking action.
- Integrated GitHub's REST and GraphQL APIs with a **3-layer prefetch architecture** for instant screen transitions, plus a custom file tree explorer with syntax highlighting.
- Built with React Native Reanimated for **60fps animations**, Shopify FlashList for better list performance, and **MMKV-backed offline caching** with network state detection.
- Ships with **5 themes**, keyboard shortcuts, root/debugger detection, and a beta program with feedback pipeline.

OIDC: Identity Provider & Next.js SDK |

Node.js, TypeScript, Express, Prisma, PostgreSQL, RS256 (JWT)

- Built an **OpenID Connect Identity Provider** from scratch implementing the full **OAuth 2.0 Authorization Code Flow**.
- Implemented **PKCE (S256)** verification, **RS256 asymmetric JWT signing** with RSA key pairs, and **refresh token rotation** with atomic reuse detection.
- Developed a standard OIDC discovery document and JWKS endpoint, so any compliant client can auto-configure and verify tokens.

- Shipped a Next.js SDK (@kleis-auth/nextjs) with context providers, hooks, and middleware that reduces auth integration to **under 15 lines of code**.

XML Sitemap Generator: SEO Crawling Engine | 🔄

Next.js, BullMQ, Redis, Puppeteer, Server-Sent Events

- A **hybrid web crawler** with a **BullMQ background job queue** backed by Redis, handling up to 1,000 pages per crawl with configurable concurrency and depth limits.
- Detects **Client-Side Rendered** pages via a scoring-based heuristic model and falls back to Puppeteer, with **async browser pooling** that auto-recycles Chromium every 100 loads.
- Parses robots.txt per **RFC 9309** with wildcard and longest-match semantics, and generates **Google-compliant image sitemaps** from shadow DOM and srcset attributes.
- Automatically **splits large sitemaps** (over 50,000 URLs) into index files, verifies discovered URLs with HEAD-only requests, and blocks SSRF against private IPs.
- Streams live crawl progress via **Server-Sent Events** with a **crawl history dashboard** for reviewing past runs.

Reiatsu: Zero-Dependency HTTP Framework | 🔄 | 🌐

TypeScript, Node.js Core Modules, npm

- Published an HTTP server framework with **zero dependencies**, built entirely on **Node.js core modules** (http, zlib, crypto).
- Implemented a **compile-time type-safe router** with route parameter inference using recursive template literal types, and an async onion-model middleware pipeline.
- Ships with rate limiting, CORS, CSRF protection, Brotli compression, and JWT authentication. **Under 45KB** total.

TECHNICAL SKILLS

Frontend: React.js, Next.js, React Native, Expo, TypeScript, Tailwind CSS

Backend & Frameworks: Node.js, Express.js, REST APIs, OAuth 2.0, OIDC, WebSockets, SSE

Databases & ORM: PostgreSQL, Prisma, MongoDB, Mongoose, SQLite

Tooling: TanStack Query, Zustand, Zod, React Hook Form, Turborepo, Bun, Vitest

DevOps & Infra: Vercel, Render, Hostinger, Git/GitHub, Cloudflare Workers, Puppeteer

EDUCATION

Bachelor of Engineering in Electronics & Telecommunication

July 2024

Graduated

CERTIFICATIONS

Full Stack Web Development Cohort, **Completed 2026**

Focus: Advanced Node.js backend architecture, system design, and scalable API development.
